TERRESTRIAL MAGNETIC ANOMALIES IN EUROPE AND THEIR
CONNECTIONS WITH GEOLOGICAL CONDITIONS: A STUDY ON
ROCK MAGNETISM

W. Schumann

Akademie Verlag Berlin, 1949.

Note: The following is the table of contents ^{of} No. 14 in the series published by the Geophysikalische Institut Potsdam; printed by the Leipzig Press in Leipzig. 7

	Pages
Introduction	5
A. Rock magnetism and the form of its appearance	8
a) The normal field and the local distortion field (anomalies). Definitions	8
b) Magnetic anomalies and disturbances of gravity	9
c) Magnetic minerals, rocks and ore	11
1. Magnetite, ilmenite, hematite	12
2. Magnetic pyrrhotite, ferrous sulfide (pyrite) pentlandite, troilite	14
3. Hematite, limonite, goethite, boehmite varieties	14
4. Magnetic rocks and ores	15
5. Brief petrographic characteristics and several important cases of magnetic rocks and ores in Europe	16
6. Rocks with mineral iron content	22
7. Magnetic mineral and their iron content	25
d) 1. Physical and chemical conditions governing magnetization	30
2. Rock magnetization	33
α) Influence of temperature	34
β) Duration of the magnetizing effect	39
γ) Demagnetizing and inhomogeneity of the underground	41

CONFIDENTIAL

CONFIDENTIAL

	Pages
δ) Influence of tectogenesis and of general geological conditions	43
ε) Anomalous magnetization and its supposed reasons	49
3. Secular variation	54
e) Definitions of anomalies of terrestrial magnetism	60
B. Magnetic anomalies in Europe and their connections with geological conditions	63
a) Geological and magnetic conditions in East and North Europe	63
1. The Russian table	63
2. The anomalies of Kursk and Krivoy Rog - Kremenchug	68
3. The Scythian wall as West boundary of the Russian table	72
4. Anomalies over the crystal base of the Baltic shield	79
5. Anomalies in the zone of the Norwegian Calodontans	81
b) Disturbances of terrestrial magnetism in Middle Europe	83
1. North zone of Saxon faulting and warping fields	83
2. Connection between magnetic anomalies and salt deposits in North Germany	94
3. The central variscites	96
α) Disturbances in the space of the Bohemian mass and in the region of its boundary	98
β) Orogeny of South Germany, Rhine massif and Hessian eruvatives	108
γ) Magnetic character of the variscite structure and Rhine tectonic	118
C. Summary and survey	128
D. Bibliography	130
E. Subject, name and location index	139-147
